

ABSTRACT OF SANITARY REPORTS.

VOL. X.

WASHINGTON, D. C., JULY 12, 1895.

No. 28.

TREASURY DEPARTMENT, *United States Marine-Hospital Service*.—Published in accordance with act of Congress approved February 15, 1893.

UNITED STATES.

[Reports to the Supervising Surgeon-General M. H. S.]

Status of Smallpox in Arizona.

NOGALES, ARIZ., *June 30, 1895.*

SIR: I have the honor to inform you that during the last 15 days no new cases of smallpox have occurred in Nogales, and that the town and vicinity are free of the disease. I inclose the certificate of the physicians of the Minas Prietas Mining Company certifying that smallpox has ceased to exist as an epidemic at that place, acting upon which information I have discontinued the quarantine against that camp.

Very respectfully,

W. F. CHENOWETH,
Sanitary Inspector, M. H. S.

[Inclosure.]

MINAS PRIETAS, *June 26, 1895.*

We, the undersigned, physicians of "The Creston-Colorado Company," do hereby certify that smallpox has ceased to be epidemic in this camp and vicinity, and that we will aid the United States Marine-Hospital Service in preventing the contagion being carried into the United States by giving health certificates to all those entitled to them and notifying the inspector at Nogales, Ariz., of any that leave without such certificate as long as there is any threatened danger.

AUSTIN C. WRIGHT, M. D.
R. S. HOWETT, M. D.

Smallpox in the United States as reported to the Supervising Surgeon-General Marine-Hospital Service, April 1 to July 9, 1895.

Am. sch. Oscar G.....	June 28.do.....do.....	Disinfected and held for observation.
Span. ss. Alicia	June 30.	Cienfuegos..	Charlotte Harbor.	Held for disinfection.
Span. ss. Maria.....do.....	Puerto Ricodo.....	Disinfected and held for observation.

* Previously reported.

One vessel inspected and passed.

PORT TOWNSEND QUARANTINE.

Week ended June 29, 1895.

Six vessels inspected and passed.
One vessel spoken and passed.

SAN DIEGO QUARANTINE.

Week ended July 3, 1895.

One vessel inspected and passed.

Reports of States and Yearly and Monthly Reports of Cities.

CONNECTICUT—*Hartford*.—Month of June, 1895. Estimated population, 60,000. Total deaths, 81, including phthisis pulmonalis, 10; enteric fever, 6; diphtheria, 1; and whooping cough, 2.

Meriden.—Month of June, 1895. Estimated population, 28,500. Total deaths, 23, including phthisis pulmonalis, 3; and scarlet fever, 1.

Westport.—Month of June, 1895. Estimated population, 4,000. Total deaths, 6, including 2 from phthisis pulmonalis.

GEORGIA—*Columbus*.—Month of June, 1895. Estimated population, white, 10,276; colored 9,027; total, 19,303. Deaths, white, 16; colored, 22; total, 38, including phthisis pulmonalis, 1; and whooping cough, 1.

KENTUCKY—*Louisville*.—Month of June, 1895. Estimated population, 200,000. Total deaths, 240, including phthisis pulmonalis, 39; enteric fever, 7; scarlet fever, 1; diphtheria, 1; and measles, 1.

MICHIGAN.—Week ended June 29, 1895. Reports to the State board of health from 58 observers indicate that cholera morbus and remittent fever increased, and that pleuritis decreased in area of prevalence.

Phthisis pulmonalis was reported present during the week at 165 places, scarlet fever at 29, diphtheria at 17, measles at 14, enteric fever at 10, and smallpox at 4 places.

Month of June, 1895. Compared with the preceding month cholera morbus, cholera infantum, and diarrhea increased and influenza, pneumonia, and scarlet fever decreased in area of prevalence.

Compared with the average for corresponding months in the nine

years 1886-1894, measles, pneumonia, intermittent fever, and consumption were less prevalent in June, 1895. (No disease was more prevalent.)

Including reports by regular observers and others, consumption was reported present in Michigan in the month of June, 1895, at 173 places (probably a very small proportion of the cases of consumption are yet reported), scarlet fever at 61 places, diphtheria at 38 places, measles at 37 places, typhoid fever at 22 places, and smallpox at 4 places.

Reports from all sources show consumption reported at 18 places more, scarlet fever at 16 places less, measles at 9 places less, diphtheria at 6 places less, and typhoid fever at 1 place less in the month of June, 1895, than in the preceding month. Smallpox was reported at the same number of places (4) in each of the months of May and June.

MINNESOTA—*Winona*.—Month of June, 1895. Estimated population, 22,000. Total deaths, 23, including 3 from phthisis pulmonalis.

NEW YORK.—Month of May, 1895. Reports to the State board of health from 8 districts, including New York City, Brooklyn, and 150 other cities, towns, and villages, show a total of 9,452 deaths, including phthisis pulmonalis, 1,149; enteric fever, 92; scarlet fever, 83; diphtheria and croup, 390; measles, 183; and whooping cough, 77. The Monthly Bulletin says:

The average daily mortality for the month was 308, having fallen from a daily average for the preceding month of 351, and for the preceding four months of the year of 368. This abrupt decrease, amounting to 1,000 from the month of April, is due to the suspension of the grippe epidemic, which began in January and terminated at the commencement of May, having caused, during the four months of its continuance, about 5,000 deaths. There were 700 fewer deaths from acute respiratory disease than in April, 100 fewer each from consumption and old age, and from all local diseases the mortality was diminished, reports of grippe finding report under these chiefly. There is also a decrease in the zymotic mortality, from all of which there were 1,100 deaths, which is 100 less than in either March or April and 200 less than in the corresponding month of last year. From all the diseases of this class there are fewer deaths, with the exception of measles, which has been increasing for four months, chiefly in the maritime district, and is causing double the mortality of a year ago. Typhoid fever caused 90 deaths, one-third of which occurred in the Hudson Valley district, where, however, there is a material diminution from the mortality of the last two months. Diphtheria caused 25 fewer deaths than in April, all of which decrease is credited to the maritime district; there were 150 less deaths than in May of last year. Smallpox, for the first time in three months, caused 1 death, in New York; it does not exist elsewhere in this State, and is being reported from but few localities in other States. The infant mortality (under 5 years) was 30 per cent, which is about the average for May. Death rate for the month, 17.35. Reports of contagious diseases from local boards of health show no marked prevalence anywhere.

Batavia.—Month of June, 1895. Estimated population, 9,000. Total deaths not reported. The deaths include 2 from phthisis pulmonalis, 1 from enteric fever, 1 from scarlet fever, and 1 from measles.

OHIO—Toledo.—Month of June, 1895. Estimated population, 120,000. Total deaths, 103, including phthisis pulmonalis, 6; enteric fever, 1; diphtheria, 1; measles, 6; and whooping cough, 4.

Youngstown.—Month of June, 1895. Estimated population, 35,000. Total deaths, 37, including phthisis pulmonalis, 4; scarlet fever, 1; and measles, 1.

TENNESSEE—Chattanooga.—Month of June, 1895. Estimated population, white, 27,000; colored, 13,000; total, 40,000. Deaths, white, 12; colored, 17; total 29, including croup, 1, and whooping cough, 2.

BRAZIL.

Sanitary Reports from Rio de Janeiro.

RIO DE JANEIRO, June 4, 1895.

SIR: I have the honor to transmit report for week ended June 1, 1895.

There were 8 deaths from *accessio pernicioso*, a decrease of 6; 9 from yellow fever, a decrease of 14; 6 from smallpox, an increase of 2; 6 from enteric fever, the same as in the foregoing week; 2 from beriberi, none in the former week; 2 from measles and 1 from whooping cough, the same as in the previous week; 1 from influenza; 2 from choleric form diarrhea, an increase of 1; and none from other choleraic diseases. The total number of deaths from all causes was 279, a decrease of 64 from the foregoing week.

I am happy to say that the above shows a decided improvement in the sanitary condition of the town and port.

Cholera.—I hear nothing more of this disease, though occasionally a death from some choleraic form of disease is reported, which I do not think means much.

Yellow fever.—The few sporadic cases of this disease are steadily declining in number, so that there is nothing here now more than usual for the time of the year.

Since last report the following-named ships have been visited or received bills of health from this office: May 29, American bark *H. L. Routh*, for Brunswick, Ga.; June 1, Italian bark *Riviere*, for Mobile, Ala.

Respectfully, yours,

R. CLEARY, M. D.,
Sanitary Inspector, M. H. S.

RIO DE JANEIRO, June 11, 1895.

SIR: I have the honor to inclose report for week ended June 8, 1895.

There were 9 deaths from *accessio pernicioso*, an increase of 1 over the foregoing week; 21 from yellow fever, an increase of 12; 12 from smallpox, an increase of 6; 4 from beriberi, an increase of 2; 3 from enteric fever, a decrease of 3; 2 from measles and 1 from whooping cough, the same as in the foregoing week; 1 from choleric form diarrhea, a decrease of 1; and 1 from diphtheria and 1 from leprosy. From all causes there were 350 deaths, an increase of 71 over the previous week.

The increase in the number of deaths is great, and I do not know what to attribute it to, unless to the damp weather.

Yellow fever.—The number of deaths from this cause more than doubled in this week, but it is not unusual at this time of the year to have rises and falls in the number of deaths until the end of June, when the disease becomes almost extinct, as a rule, but it is never entirely so in this town. There is no fear of an epidemic at this time of the year.

Cholera.—No more cases of this disease have appeared either in the interior or in this town. The one case of choleric form diarrhea reported may or may not have been cholera. I doubt it.

Smallpox.—There is always an increase in the number of deaths from this disease in the so-called winter season, which is now beginning, and the 12 deaths from this cause are not excessive, as they occurred at scattered points, and it does not appear to be extending epidemically.

Leprosy.—It is well known that there are many lepers in the interior of the State of Sao Paulo, and this case may have come from that part of the country.

Measles and diphtheria.—As for these diseases they are not epidemic here, and have not been since I knew the place, but sporadic cases do appear, usually brought from outside.

Since last report the following-named ships have been inspected or received bills of health from this office: June 4, steamship *Coleridge*, British, for New York, N. Y.; June 5, steamship *Olbers*, British, for New York, from Santos; bark *Perfitta*, Italian, for Pensacola, Fla.; brig *Brazil*, Italian, for Mobile, Ala.; June 7, steamship *Imperial Prince*, British, from Buenos Ayres, for New York; bark *Amy*, American, for Baltimore, Md.; bark *Baltimore*, American, for Baltimore, Md.

Respectfully, yours,

R. CLEARY, M. D.,
Sanitary Inspector, M. H. S.

RIO DE JANEIRO, June 18, 1895.

SIR: I have the honor to inclose report for week ended June 15, 1895. There were 12 deaths from *accessio pernicioso*, an increase of 3 over the foregoing week; 16 from yellow fever, a decrease of 5; 9 from small-pox, a decrease of 3; 5 from enteric fever, an increase of 2; and beriberi, leprosy, diphtheria, measles, and whooping cough have dropped from the list. From all causes there were 316 deaths, a decrease of 34. On the whole, the above report is satisfactory, as yellow fever and small-pox are both declining, and cholera and choleraic diseases have disappeared from the lists.

Since last report the following-named ships have been inspected or received bills of health from this office: June 11, ship *Morioneth*, British, for San Francisco, Cal.; June 12, steamship *Bellarden*, British, from Santos for New York; June 15, steamship *Carib Prince*, British, from Santos for New York; June 17, steamship *Capua*, German, from Santos for New York; June 18, steamship *Asiatic Prince*, British, from Santos for New York.

Respectfully, yours,

R. CLEARY, M. D.,
Sanitary Inspector, M. H. S.

CENTRAL AMERICA.

Sanitary Condition of Central American Ports.

BELIZE, B. H., July 5, 1895.

SIR: During the past month I have made four sanitary inspections of Livingstone, Port Barrios Gua, and Port Cortez, Spanish Honduras. These ports, as also Belize and the coast towns of the colony of British Honduras, are up to present time free from yellow fever or other contagious or infectious diseases.

I am, very respectfully, yours,

J. L. POSEY, M. D.

CUBA.

Yellow Fever in Cuba.

The following figures relative to yellow fever have been obtained

from the latest reports received from the United States sanitary inspectors on duty in Cuba:

Places.	Date.	Cases.	Deaths.	Remarks.
Havana	June 30-July 4...	20	10	About 5 deaths daily; military hospital crowded with cases, yellow fever being prevalent in its most malignant form.
Santiago de Cuba.....	June 22-June 29...		28	
Gibara.....	Jan. 1-June 23...		2	
Puerto Principe.....	June 27.			

KOREA.

Cholera in Korea.

WASHINGTON, D. C., July 6, 1895.

SIR: I have the honor to apprise you of the receipt of a telegram from the United States minister at Seoul, of the 30th ultimo, saying that cholera at Weijii is spreading.

I have the honor to be, sir, your obedient servant,

ALVEY A. ADEE,
Acting Secretary.

The Hon. SECRETARY OF THE TREASURY.

MEXICO.

One Case of Smallpox in Nogales.

NOGALES, ARIZ., July 1, 1895.

SIR: I have the honor to report 1 new case of smallpox in Nogales, Mexico.

W. F. CHENOWETH,
Sanitary Inspector, M. H. S.

STATISTICAL REPORTS.

AFRICA—*Mozambique*.—Month of March, 1895. Estimated population, 10,000. Total deaths, 12. No deaths from contagious diseases.

CANADA—*Hamilton*.—Month of June, 1895. Estimated population, 50,000. Total deaths, 62, including phthisis pulmonalis, 9; scarlet fever, 1; and diphtheria, 2.

CUBA—*Havana*.—Under date of July 6 the United States sanitary inspector reports as follows:

There were 663 deaths in this city during the month of June, 1895. Fourteen of those deaths were caused by yellow fever, 18 by enteric fever, 14 by so-called pernicious fever, 3 by paludal fever, 54 by enteritis, 23 by dysentery, 25 by smallpox, 17 by pneumonia, and 2 by glanders.

During the week ending July 4 there were 158 deaths, 10 of which were caused by yellow fever, with approximately 20 new cases. Four were caused by enteric fever, 2 by so-called pernicious fever, 1 by palu-

dal fever, 2 by diphtheria, 10 by enteritis, 4 by dysentery, 3 by smallpox, and 1 by pneumonia.

FRANCE—*Rouen*.—Month of May, 1895. Estimated population, 111,847. Total deaths, 277, including phthisis pulmonalis, 50; enteric fever, 4; and croup, 15.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 33 great towns of England and Wales during the week ended June 22 corresponded to an annual rate of 16.2 a thousand of the aggregate population, which is estimated at 10,591,530. The lowest rate was recorded in Croydon, viz, 6.8, and the highest in Liverpool, viz, 25.1 a thousand.

London.—One thousand two hundred and seventy-six deaths were registered during the week, including measles, 71; scarlet fever, 11; diphtheria, 37; whooping cough, 18; enteric fever, 4; and diarrhea and dysentery, 46. The deaths from all causes corresponded to an annual rate of 15.1 a thousand. In greater London 1,620 deaths were registered, corresponding to an annual rate of 14.0 a thousand of the population. In the "outer ring" the deaths included 19 from measles and 15 from diphtheria.

Ireland.—The average annual death rate represented by the deaths registered during the week ended June 22 in the 16 principal town districts of Ireland was 21.4 a thousand of the population. The lowest rate was recorded in Drogheda, viz, 4.4, and the highest in Armagh, viz, 42.1 a thousand. In Dublin and suburbs 135 deaths were registered, including smallpox, 6; enteric fever, 1; measles, 1; scarlet fever, 3; diphtheria, 1; and whooping cough, 1.

Scotland.—The deaths registered in 8 principal towns during the week ended June 22 corresponded to an annual rate of 19.4 a thousand of the population, which is estimated at 1,500,435. The lowest mortality was recorded in Paisley, viz, 16.0, and the highest in Greenock, viz, 24.3 a thousand. The aggregate number of deaths registered from all causes was 560, including smallpox, 1; scarlet fever, 7; measles, 14; diphtheria, 4, and whooping cough, 20.

NOVA SCOTIA—*Windsor*.—Month of June, 1895. Estimated population, 3,000. Total deaths, 2, including 1 from phthisis pulmonalis.
